

Luxaire® Eclipse™ Series Rooftops

Building owners traditionally face two options when older rooftop units reach the end of their life cycles: install a new unit from the same manufacturer to fit an existing curb, or install a different manufacturer's unit, but at an increased cost and complexity due to a needed curb adapter to fit an existing base. Now there's a better choice: the Luxaire® Eclipse™ Series.

Reduced Complexity

Luxaire® Eclipse™ rooftop units allow you to confidently replace outdated packaged rooftop HVAC units simply and affordably — saving time, money and materials by fitting precisely on pre-existing, competitive curbs without the need for a transition. The compact Eclipse™ cabinet is available in two heights and footprints to provide a hassle-free solution.

Superior Quality

Designed, engineered and assembled in the United States, Eclipse™ units are closely monitored and tested at the factory to ensure manufacturing processes result in the best quality possible. And we don't stop there — rigorous salt-spray testing confirms the powder paint exterior finish provides superior corrosion resistance, and the cabinet's top panel is embossed for added strength. Even the base rail material is stronger than average to withstand wind and resist flexing during installation.

Maximized Efficiency

With cooling ratings of up to 15 SEER (12 EER) for ENERGY STAR® qualified products, Eclipse™ rooftop units cut energy costs as much as 40% compared to older units. Optional economizers incorporating low-leak capabilities meet ASHRAE 90.1-2010 standards — a respected energy efficiency benchmark.

Advanced Features

Luxaire® Eclipse™ rooftop units are available with hail guard or hinged panel options; economizer and fresh air and relief damper options; three static drive options for airflow versatility up to 2-inch ESP; and options for 2-inch or 4-inch air filters and coil coatings. Powered and unpowered convenience outlets, disconnect switches, as well as smoke and CO₂ detectors, are also available.

Search for "Direct Rooftop Replacement" in Google Play or the Apple App Store and download our easy-to-use competitive compatibility app.

Precision in Every Configuration

With two cabinet sizes that fit perfectly within many existing unit footprints, Luxaire® Eclipse™ packaged cooling and heating units simplify the transition process by avoiding material, labor and height restrictions that transition curb solutions typically encounter. Configurations with cooling, gas heating or electric heating provide additional options for a variety of installations.

- Eclipse™ rooftop units fit existing curbs without needing an adapter.
- Indoor and outdoor fans are dynamically balanced for better performance and reliability. Three static drive options provide airflow versatility up to 2" ESP.
- Advanced scroll compressor design uses fewer moving parts for a quieter, more reliable and efficient system.
- Smart Equipment
 ensures easier
 installation,
 startup and
 troubleshooting versus
 electromechanical
 controls.
- Embossed top cabinet panels provide increased structural support and rigidity.
 Powder paint exterior finish provides better corrosion protection than pre-painted steel.
- Condenser coils constructed of MicroChannel aluminum tubing and aluminum fins for durability and long-lasting, efficient operation.
- Choice of 2" or 4" filters
 that can be easily
 converted without
 special tools.
- ENERGY STAR®
 qualified models offer
 optional, low-leak
 economizers with
 integrated controls
 that meet ASHRAE
 90.1-2010
 requirements.
- Designed, engineered and assembled in the United States to ensure quality.

Remote Monitoring Smart Equipment

Every Eclipse™ unit comes standard with Smart Equipment, a digital control system that makes system setup, optimization and maintenance far easier than older, electromechanical controls. Optional remote data access is available via our Mobile Access Port (MAP), and our Fault Detection and Diagnostics (FDD) system is available to further reduce service steps. Smart Equipment benefits include:

Easy-to-read LCD display with navigational joystick and buttons 24/7 real-time reporting and performance alerts viewable via web browser On-board
USB port for
uploading or
downloading
software and
unit information

Independent safety monitoring to ensure unit protection and easy troubleshooting Designed to work with Verasys[™], a plug-and-play control system that integrates building systems to reduce complexity and provide greater capabilities than traditional systems

Building automation compatible with optional communication card; BACnet, N2 and ModBUS RTU protocols available
